Press Release

(Company Name) Offers Customers New Online Application that Automatically and Instantly Updates Any Customer Credit Card on Any Merchant site

Credit Union Customers SaveTime and Eliminate the Hassle Associated with Alerting Payment Sites When Cards are Newly Issued, Expired, Lost or Stolen

CITY OF DISTRIBUTION (MONTH XXXX)

(City where company is located) -based financial services company (NAME with hyperlink to website) announced today that the credit union now offers a revolutionary new technology and application, that will securely make managing customer credit cards hassle-free. The intuitive web and mobile browser application uses first-of-its kind automation that instantly updates any card on any merchant site in real time, in one place. Consumers now have an easy, convenient and secure way to ensure all their online shopping and billing accounts have the most up-to-date payment information.

"The easy-to-use application will solve a huge and irritating issue faced by card users," said (C-level exec at Company). "Lost, stolen, compromised or newly issued cards generate a lot of work and inconvenience for customers. (Company) is thrilled to be one of the first financial institutions to bring this breakthrough technology service to our valued customers."

Each year, more than 700 million new payment cards are issued, forcing cardholders to update their card information online. The average cardholder has 2.5 cards in their wallet and must update those cards at all of their online accounts anytime it expires or is compromised.

"Whenever a card is changed, it leaves the customer open for late payments, loss of purchasing power and miscommunications with their online merchants. This new product empowers our customers to more efficiently and effortlessly manage all of their online payments," added (C-level executive).

"It used to take me hours to update all my payment information across all of my merchants or vendors when a credit card changed, and many times charges were declined or I'd miss a payment due to a company not having my correct payment data," said credit union customer (name). "Now all I have to do is input the new card information once and the application immediately updates all of my online purchasing sites."

The updating app is a cloud-based software solution that uniquely combines a scalable machine-learning engine and artificial intelligence. The app does not retain cardholder data after use. During use, cardholders can trust that their personal data is protected with the most advanced form of encryption security technology available.
